

## Panel Covers & Custom Labels Now Available

At SecuControl, Inc., we continually push for **innovation and improvement** in our products. The Interface Test System is the next generation in test switch technology and with the addition of panel covers and custom printed module labels, the customer's ability to **specify a completely custom test switch** is even greater.

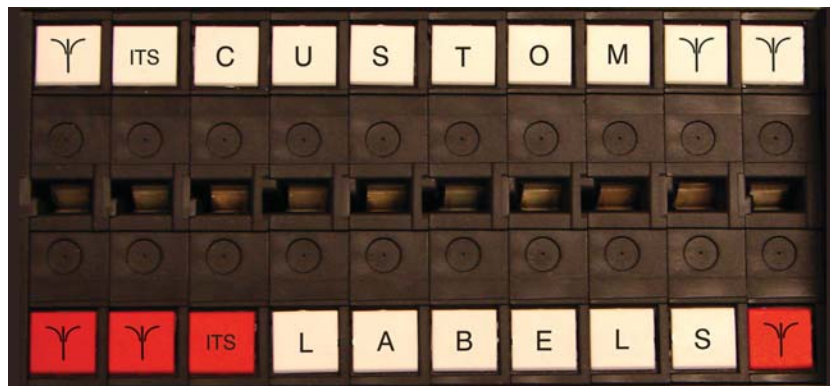

### Panel Covers

Our new **low profile** panel covers keep our flush mounted test blocks **dust free and secure** while they are not in use. Each cover is made of **aluminum**, sized to protect any number of modules and **painted to match** your panel paint specifications.

### Custom Labels

Also now available are custom module labels printed at our factory. We can provide these labels with **logos, letters, numbers and special characters**. Since the ITS is great for mounting vertically we can also provide **vertical labeling** for easy identification. This new feature will allow our customers to specify intuitive labels without having to create their own to put on the panel.

**Order your Interface Test System today with our new panel covers and custom labeling!**
